Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 7-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jackson as applied to claim 1 above.

In regard to claim 7, Jackson discloses all of the claimed limitations as mentioned above, and further shows that the plurality of the pins are formed on the edge, or corners, of the device, see also, fig. 1B. Jackson, however, does not expressly teach that the pins are in the at least three corners of the device since there is none of the figures shows the top view of the device. But it would have been obvious to one of ordinary skill in the art to realize that the pins should be at least at three corners in order to keep the device 130 align to the substrate since the three corners would define a plane.

In regard to claim 8, Jackson discloses all of the claimed limitations as mentioned above, and further suggests that the pins may be from in different shapes in order to fit into the holes on the substrate, except the pin is a shaped like square in section.

At the time of the invention was made, it would have been obvious to a person of ordinary skill in the art to modify the pin with a square shape because applicant has not disclosed that this shape provides an advantage, is used for a particular purpose, or solves a stated problem. One of ordinary skill in the art, furthermore, would have

expected applicant's invention to perform equally well with either shape because they perform the same function of positioning the module to the substrate.

Therefore, it would have been obvious to one of ordinary skill in the art to modify Butterbaugh to obtain the invention as specify in the above claims.

Indeed, it has been held that mere dimensional limitations are prima facie obvious absent a disclosure that the limitations are for a particular unobvious purpose, produce an unexpected result, or are otherwise critical. See, for example, *In re Rose*, 220 F.2d 459, 105 USPQ 237 (CCPA 1955); *In re Rinehart*, 531 F.2d 1048, 189 USPQ 143 (CCPA 1976); *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984); *In re Dailey*, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).

Note that the specification contains no disclosure of either the critical nature of the claimed dimensions of any unexpected results arising therefrom. Where patentability is aid to be based upon particular chosen dimensions or upon another variable recited in a claim, the Applicant must show that the chosen dimensions are critical. *In re Woodruff*, 919 F.2d 1575, 1578, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

Response to Arguments

4. Applicant's arguments with respect to claims 6-8 have been considered but are moot in view of the new ground(s) of rejection.
